Interactive AI Table

Our interactive project showcase technology brings together the power of 3D models, sliding screens, and an LED face to create an engaging and educational experience.

- Transformative 3D Model Showcase Table : Custom 3D models are placed on the LED table.
- Content is synchronized across all surfaces of the table to give a complete visual experience.
- The surface of the table is made of 4 LED screens and upon selection of the topic, the screen will levitate to emphasize on the chosen topic.

Kinetic Cube

The Kinetic LED Cube incorporates two layers of captivating 3D models that are unveiled through lifting motions, creating a mesmerizing display.

Tablet Interface: Users can activate the models and access additional information, while key figures can be slid up for a closer examination.

The LED screen provides a seamless and immersive experience by showcasing dynamic content.

Rotating Column (SPINHEX)

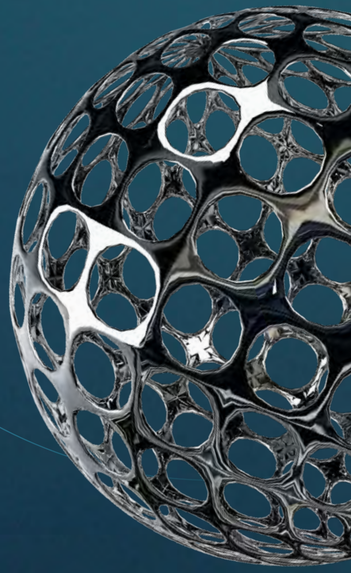

SPINHEX: Vertical totems housing 3 to 4 LED blocks each.

The program offers flexibility, enabling customization of both block and totem movements.

The LED configurations are entirely adaptable, ensuring tailored content
loops for a brand-relevant experience.

Interactive Digital Tree

This innovative technology features a life-sized tree with embedded video displays on its branches.

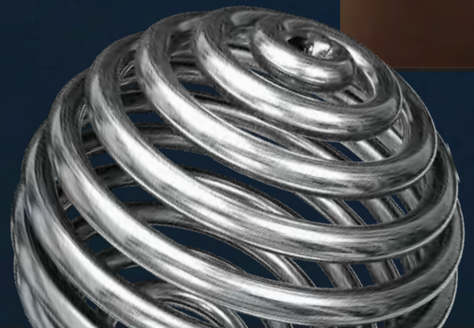

With a user-friendly tablet interface, visitors can seamlessly navigate through a range of topics, triggering relevant content on a synchronized video wall.

Engage viewers in a customized, immersive learning journey tailored to your requirements.

The Interactive Digital Tree delivers a captivating and interactive experience, by advancing the user interaction with information.

Interactive LED Sculpture

An immersive setup features a 3D Interactive AI face, accompanied by a curved LED panel backdrop and an LED floor panel spanning in front of the AI face. The AI face possesses the ability to speak and provide users with pertinent information about the company. The curved LED panel is seamlessly connected to the AI face, enabling it to display relevant infographics in real-time as the AI face communicates. Additionally, the floor panel is interactive, triggering unique animations whenever a user steps on a particular panel.

Touch & Throw

A transparent OLED display is placed at a 45-degree angle, allowing for an interactive experience. The screen constantly displays different topics in a carousel-like manner when it is not being used.

To access a specific topic, users can select it and swipe upwards.

As the transition takes place from the floor LED to the Wall LED, the LED screen gradually unveils a video that is relevant to the chosen topic.

Robotic Arm Show

Robotic Arms: Redefining event design with futuristic concepts.

Custom Movements: With adaptable movements and adjustable speeds, these arms redefine event design, allowing for personalized choreography and dynamic stage displays.

TV Screens: By integrating screens, these arms become dynamic platforms for conveying captivating content and showcasing narratives through the motion-driven display.

Holograms: The arms can also be used for a hologram show enabling the presentation of complex concepts or immersive storytelling in a unique, spatially engaging manner.

National Celebration: The arms can be deployed with flags for a futuristic visual on country's national celebrations.

RFID Selector with Circular LED

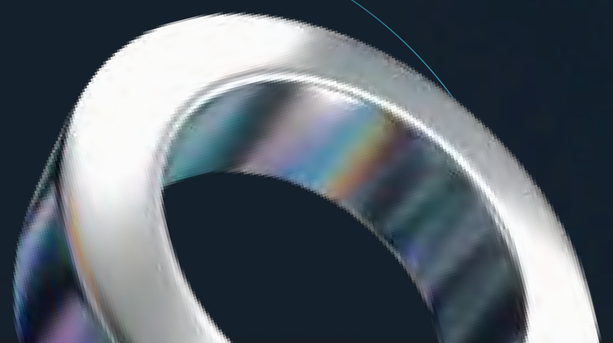

- Featuring RFID transparent cards, a reader, and a cursor pad, this innovation supports 8-12 topics for seamless interaction.
- Each RFID card corresponds to a specific topic, effortlessly triggering the display upon insertion.
- Users navigate through topics using the cursor pad, exploring content with scroll and click functionalities.

Engaging seamlessly designed UI and motion graphics deliver immersive content experiences, transforming user interaction into an intuitive and captivating journey.

AR Integrated Sliding Screen

Explore Products in a New Dimension.

This interactive solution features a sliding screen on a track with multiple trigger points, accompanied by a touch screen interface. 3D models of various products are placed along the track's trigger points.

- User can select a product via the interface, prompting the screen to slide to the corresponding point.
- Once there, it displays AR content showcasing the product in a fully immersive 3D environment, offering an unparalleled way to explore and interact with product information.
